

ECCOSORB® AN

Flexible Foam Sheet Broadband Microwave Absorbers

Material Characteristics

- Lightweight, flexible, broadband, open-cell, polyurethane foam absorber
- Carbon loaded, laminated polyurethane sheets
- Frequency range from 600 MHz -40 GHz
- Designed to reflect less than -17 dB of normal incident energy above specified frequencies and relative to a metal plate
- Does not support fungal growth per MIL-STD-810E
- Can be readily cut on a band saw, with scissors, die, or a sharp knife

Applications

- ECCOSORB® AN is commonly used for the lining of small test chambers to reduce reflections
- ECCOSORB® AN has been used in reducing crosstalk between adjacent antennas, shrouding antennas to improve the antenna patterns and undesired backlobes, as well as selective shadowing of parts of a target for RCS measurements
- Shadowing of posts and supports in anechoic chambers, and as absorbing blankets for testing radar systems without harm to personnel
- For isolation of components or antennas by means of insertion loss, it can be used without a metal backing

Environmental Properties

- ECCOSORB® AN is *not* waterproof and will not operate correctly when wet. Since there is no washout, ECCOSORB® AN will function as expected after being allowed to dry
- A special CERSEAL coating to prevent moisture uptake in high humidity to moderately wet environments is available on special request
- For waterproof applications, see ECCOSORB® ANW or ECCOSORB® AN can be coated with CERSEAL

Availability

- Standard sheets are 24" x 24" (61 cm x 61 cm)
- Thickness depends upon the lowest desired frequency of operation required
- ECCOSORB® AN is available in other sizes and customer specified configurations, incorporating miter cuts or attachment to metal parts
- Can be manufactured, on special order, on a mandrel, to take a contoured shape.

Instructions for Use

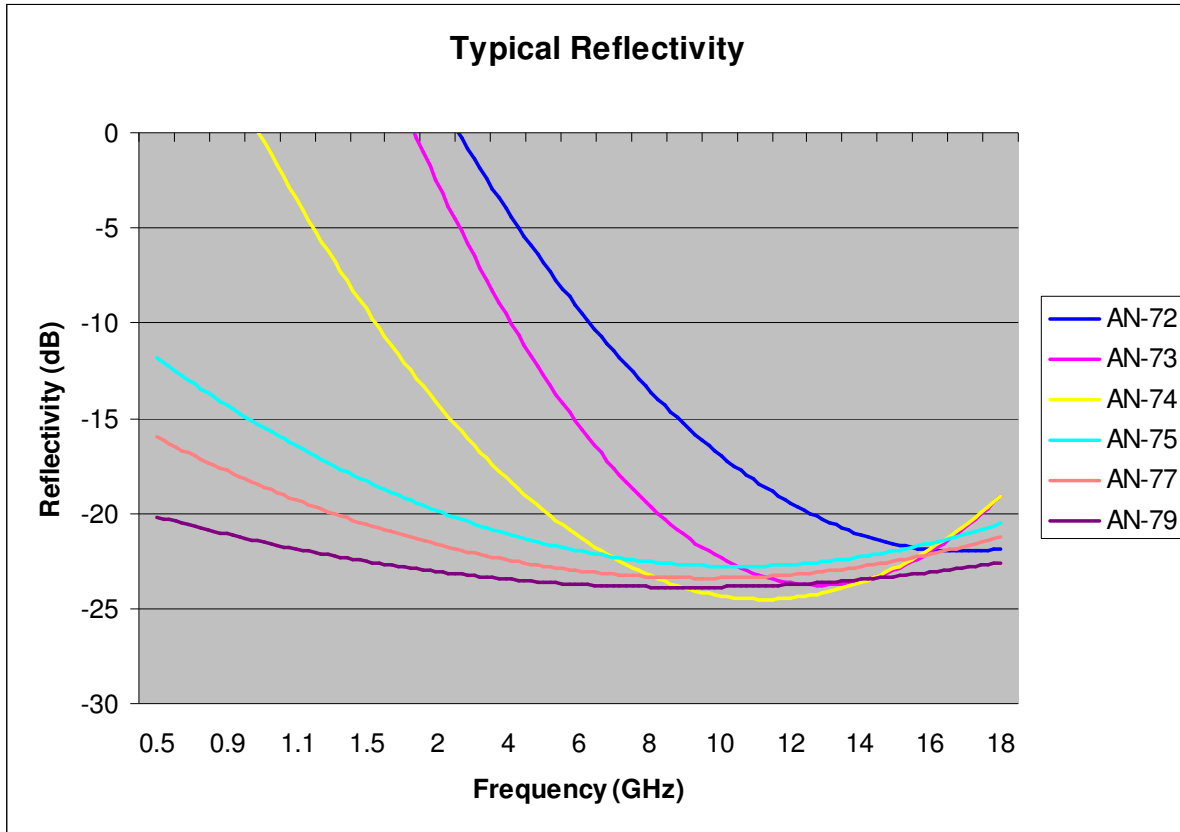

- To obtain low reflectivity, the absorbers must be mounted on a metal surface. If a metal surface is not available, ECCOSORB® AN can be supplied metal backed with aluminum foil (ML)
- Layering of multiple pieces or slicing off part of the thickness will degrade the overall performance
- Reflectivity performance also degrades for off-normal bistatic incidence and at different rates for different polarizations
- ECCOSORB® AN can be securely bonded to itself or to other materials such as metal, wood, and common plastic composites. The recommended adhesive is ECCOSTOCK® 13-111-NF.

Typical Properties

Front Surface Color (facing oncoming EMI)	White
Max. Service Temperature, °F (°C)	248 (120)
Power Handling, W/cm ²	0.15
Thermal Conductivity, cal-cm/sec- cm ² -°C	6.8 x 10 ⁻⁵
Fire Retardancy	UL 94 HBF

	Reflectivity range (>17 dB)	Thickness Inch (cm)	Weight lb/piece (kg/piece)	Density oz/in ³ (g/cm ³)
AN-72	>20 GHz	0.24 (0.6)	0.6 (0.25)	0.06 (0.11)
AN-73	>7.5 GHz	0.39 (1.0)	1.1 (0.50)	0.08 (0.13)
AN-74	>3.5 GHz	0.75 (1.9)	1.5 (0.70)	0.06 (0.10)
AN-75	>2.4 GHz	1.14 (2.9)	1.8 (0.80)	0.04 (0.07)
AN-77	>1.2 GHz	2.24 (5.7)	3.3 (1.50)	0.04 (0.07)
AN-79	>600 MHz	4.49 (11.4)	6.5 (2.95)	0.04 (0.07)

EMERSON & CUMING MICROWAVE PRODUCTS, INC., 28 York Avenue, Randolph, MA 02368 / Telephone (781) 961-9600. Use of Information and Material: Values shown are based on testing of laboratory test specimens and represent data that falls within normal range of the material. These values are not intended for use in establishing maximum, minimum or ranges of values for specification purposes.
